FIG. CATALOGUE 10 '24

ATELIER FIG.

GENERAL INFORMATION

We will always accept your order as soon as possible. In the unlikely event that this is not the case, we would like to ask you to report this to us. It is important to check the order confirmation carefully, because it represents the final execution and is binding. After the order has been put into production, we can unfortunately no longer accept complaints about the contents of the order.

Depending on the order, we will personally inform you about the production and delivery time.

During production, we will regularly inform you about the progress. Within our working method we use natural elements, therefore the production process carries some risk.

Once the order is completed, it will be sent to the address provided as soon as possible.

MADE TO ORDER

Made to order and commissioned creations can be done: please contact us for any request.

Some objects are unique in shape and/or color, other items are made in limited editions. Please contact us for new available versions. A form and color can be requested if the specific edition is still available.

Moisture absorbing foam structures are dipped in liquid porcelain, after which they are hung to dry. These structures then completely deform under the weight of the added clay. Gravity always has the last word. This makes the process a continuous back and forth between the natural force and our creative interventions, a fusion of the unexpected and the manageable.

WATCH THE PROCES FILM:

<https://www.atelierfig.com>

After the wet raw material is shaped, the product is dried and then baked at temperatures up to 1240°C. Finally, it is given a layer of coloured glaze or engobe. Ceramic products are relatively light, hard and resistant to heat and water.

Do not place outside with freezing temperatures.

DURABILITY AND MAINTENANCE

Ceramic objects will last for many years if they are properly maintained. Glazed ceramics can be cleaned using a damp cloth gently rubbed over the surface.

The 'engobe' layer is porous and the fibers of a cloth can damage the object. We therefore recommend gently cleaning the object under the shower with a soft brush.

ATELIER FIG.

‘CHOOSE FROM THE EXISTING EDITIONS OR PUT TOGETHER A SHAPE IN THE FINISH OF YOUR CHOICE.’

Each item is made to order, and is not made more often than a specific edition of the specified color shape combination.

Even if an item is made in editions, gravity will always ensure that each piece differs from each other. Some gravity pieces are one-offs in its form and color.

A special request or questions about availability and prices? Please feel free to contact us by email or telephone. And we will be happy to inform you about possibilities, new or current range of developed shapes and finishes, stock and prices.

ATELIER FIG.

Our Color and Finish Guide provides an overview of all the developed colors you can choose from for your unique piece. From subtle, natural tones to bold and expressive colors, we offer a wide range of possibilities to bring your personal preferences to life. Each piece can be finished in one of the various textures and finishes, including:

GLAZE: A smooth, reflective finish that makes the colors vibrant and adds a luxurious feel.

ENGOBE: For a more tactile and organic feel, highlighting the natural imperfections of the material.

SINTERED ENGOBE: A refined finish that shares the same color appearance as an engobe but allows the rough texture to flow more smoothly, maintaining its matte look.

We are constantly developing new colors, textures, and finishes, do you have a specific color or finish in mind that's not been made yet on our chart? Feel free to contact us! We welcome special requests and are happy to discuss the possibilities. Please note that additional costs may apply for custom requests, depending on the complexity.

ATELIER FIG.

Photo by Annik Leendertse

The Candle Holders are designed with an inverted gravity concept, where the structure seems to rise effortlessly upward. Unlike the Gravity Bowls, the weight is visually reversed, with the parabolic shape providing stability, much like the upward force seen in Gothic architecture. This inverted construction gives the candle holders a sense of lightness, despite their height, as if they are reaching for the sky.

ATELIER FIG.

The candelabra serves as a beautiful centerpiece for any table, designed to hold multiple candles in a graceful, upward-reaching structure. Echoing the inverted gravity concept, these holders use parabolic forms to support the weight of multiple candles. Like the other Gravit pieces the design process of the candelabra begins with an analog approach, involving hand-drawn sketches and paper models. Mathematical formulas are used to perfect the structure before the pattern is crafted from sponge material. This careful combination of artistry and precision ensures that each candelabra maintains its architectural integrity.

ATELIER FIG.

The Gravity Bowls are shaped by dipping them in liquid porcelain clay. They are then hung to dry, with the weight of the clay pulling the form downward. This creates a gravity-defying effect. As the wet clay drips, the bowl hardens into its final shape. Due to this transformative process, each bowl is unique.

The construction of the bowls is inspired by architecture, particularly the use of buttresses and parabolic forms. This architectural influence is reflected in the way the clay supports itself and creates dynamic, fluid structures, giving each Gravity Bowl its distinctive shape.

Each foam link is carefully glued together one by one to form the complete chain. Once fully assembled, the entire structure is dipped in porcelain. The weight of the porcelain pulls the chain into its final shape, ensuring a seamless and elegant finish. This meticulous process showcases the fusion of craftsmanship and material transformation, resulting in a distinctive and refined piece.

ATELIER FIG.

Atelier Fig, founded by Ruben Hoogvliet and Gijs Wouters, is a dynamic partnership that emerged from their shared passion for materials, craftsmanship, and the natural world while studying at ArtEZ Academy in Arnhem. The creative duo specializes in experimental processes and innovative designs, crafting extraordinary objects that provoke a heightened aesthetic awareness of the tactile experiences and the transformative nature of the creative process. Atelier Fig's distinctive creations playfully respond to the contemporary desire for novel and customized products. Their hands-on experimental approach results in remarkable pieces, which make visible to the viewer aspects of the creative process that are typically hidden. Atelier Fig has been the recipient of the Rising Talent Award in Paris, and has exhibited widely including at the Dutch Design Week and Paris Design Week. Their collaborations span the globe, with partners like Vitra in Weil am Rhein and B&B Italia in Milan.

Driven by experiment, their project the Gravity Collection started with rethinking ceramic crafts. Fascinated by liquid clay and its fluidity, they discovered techniques that would allow them to work more spontaneously and sculptural without the interference of plaster moulds. During this process they developed an alternative method into an innovative craft. They make their work by immersing moisture absorbing structures in liquid clay and leaving the clay-soaked forms to drip-dry. In this process, gravity always has the final say. This makes the process a continuous back and forth between the natural force and their creative interventions, a fusion of the unexpected and the controllable.

Craftsmanship, technical precision verses serendipity. This comes together in our wall grids. The Wall Grids are versatile architectural elements designed for a variety of applications, including wall coverings, built-in features, room dividers, and ceiling panels or mural art pieces. Their grid-like structure creates a visually striking, geometric pattern, adding texture and depth to any space. With their minimalist design, the Wall Grids serve both functional and aesthetic purposes, seamlessly integrating into different environments while enhancing the overall architectural experience.

Wall Grids
Material: Porcelain

Color: Request info for all possibilities.

Measurements: Maximum size per grid 40x40cm or 30x50cm max.

ATELIER FIG.

Made of beautiful beechwood, each part is precision crafted into beams of 2.5x2.5 cm. The width beams are milled and slide seamlessly over the invisible handmade metal dowels. Which not only provides flexibility in adjusting its shape during the shaping proces, but also keeps everything firmly together. The airy hanging aluminium interior contrasts beautifully with the sturdy wooden construction.

Inspired by Gijs's grandmother's classic Dutch linen cupboard, which as a child made him dream with amazement about what was stored inside. He turned the originally heavy mahogany cabinet inside out and constructed his own contemporary open version from raw finished materials like beechwood and aluminium. A playful yet careful process into working with wood, shaping a natural material in an unconventional way of making furniture.

'The milled frame gives us the freedom to create a beautiful centrepiece for the home or uniquely tailor-made store presentations.'

We love to dream and explore the possibilities of commissioned items, envisioning applications such as home centerpieces, kitchen furniture, retail product displays, and museum installations. With a flexible approach to construction, our hands itch with excitement at the countless forms the 'frame cabinet' can take on, from captivating showpieces to exclusive presentation furniture.
